

AccuProcess Unveils Next Generation Business Process Modeling Solution

Easy to use Application Simplifies Process Modeling for Business Users like Never Before

Chicago, IL – March 25, 2010 – Process Modeling and Simulation solutions provider, AccuProcess Inc., today unveiled its AccuProcess Modeler software product. This next generation solution combines process discovery, business process mapping, documentation and process simulation in a single, simple-to-use application.

Business users have often struggled to document their business processes because no easy-to-use tools have been available for them to use for this purpose. Often, they end up using a combination of tools such as Word, PowerPoint and Visio to do this work but those tools are drawing and text editing tools and are not designed for business process documentation and offer no modeling capabilities. This generates a mish-mash of different files and formats that are difficult to share and so results in half-hearted attempts at process documentation that are often left incomplete.

AccuProcess has designed its Process Modeler product to make the task of documenting business processes AS EASY and AS NATURAL as possible for business users. This business process modeling software product is designed and purpose-built ONLY for modeling processes and so it does this job well.

“We are excited to announce the availability of the AccuProcess Modeler business process modeling and simulation tool. This powerful Process Modeler application has been created for business users with the aim of helping put business people in charge of business processes”, said Deepak Singh, President of AccuProcess Inc.

Key capabilities and features of the AccuProcess Modeler include:

- Unparalleled simplicity and ease-of-use for Business Users
- Visual, graphical, drag and drop Process Mapping
- Wizard driven approach to Process Discovery
- Self documentation of documented business process into PDF
- Process Simulation capability to analyze cost and timing metrics
- Process Improvement and Optimization by analysis of as-is and to-be processes
- Support for BPMN standards

AccuProcess Modeler is now available for free download at the AccuProcess website. This product has been priced at a one-time license fee of \$499 per user. As a special offer, it is available for free use till June 1, 2010.

About AccuProcess:
